1.All test data is referenced to 25°C ambient. Operating. Temperature Range -55°C to + 125°C. Test Condition:100KHz, 1.0Vrms.

2.Idc:DC current (A) that will cause an approximate Δ°C of 40°C.

3.Isat:DC current (A) that will cause Lo to drop approximately 30%.

4.The part temperature (ambient + temp rise ) should not exceed 125°C under worse case operating conditions. Circuit design , component placement, PWB trace size and thickness, airflow and other cooling provision all affect the part temperature. Part temperature should be verified in the end application.

5.The rated current as listed is either the saturation current or the heating current depending on which is lower.
